OM SHAH

omsshah05@gmail.com | omshahinfo.com | github.com/0m-5hah

PROFESSIONAL SUMMARY

- Cybersecurity student at UTS with hands-on experience in vulnerability scanning, Python automation, and manual web application testing
- Experience delivering automation and compliance-focused process improvements that reduce manual work, strengthen documentation, and support audit and review activities.

EDUCATION

University of Technology Sydney | 2023 - Present

Bachelor of Cybersecurity | ***Full-time***

- **Expected Graduation:** June 2026
- **Relevant Subjects:** Cybersecurity, System Security, Information Security and Management, Cryptography, Digital Forensics, Applying Network Security, Routing and Switching Essentials, Cloud Security (AWS)

PROFESSIONAL EXPERIENCE

Migrate Zone | Jul 2023 - Present

Automation Engineer | Part-time (Dec 2024 - Present)

- Built and expanded a Python-based automation toolkit to streamline financial audit workflows, reducing manual cross-checking and duplicate processing.
- Redesigned and deployed modular automation systems for file naming, risk flagging, and document routing, cutting average case handling time from ~8.0 hours to ~5.3 hours (35 percent improvement)
- Developed an Excel prefill automation tool to structure validated case data into lodgement templates, eliminating repetitive data entry and reducing human error.
- Created a web scraping tool to monitor policy update pages, removing the need for manual checks and improving response time to regulatory changes.
- Consolidated audit validation processes into a single workflow, improving consistency and reducing missed compliance checks**.**

Junior Automation Engineer | Part-time (Jul 2023 - Nov 2024)

- Co-developed a PDF collation and OCR-based document checking workflow that reduced manual review time and caught dozens of missing, outdated, and lapsed documents each month before lodgement.
- Created step-by-step documentation for the automation toolkit, enabling administrative staff to use it independently without developer support.

ITonKey | Aug 2024 - Oct 2024

Python Backend Developer Intern | Part-time

- Built Python-based tools, including an invoicing system that transformed structured data into branded, multi-page PDF invoices using templates tailored to ITonKey's internal workflows.
- Contributed to custom software development for small business clients, focusing on inventory management features such as stock tracking and basic reporting to reduce loss and improve operational visibility

PROJECTS

Cybersecurity Capstone Studio, UTS, 2025

Sentinel (Automated Network Vulnerability Assessment Tool)

- Developed a Python-based tool which scans target subnets with Nmap/NSE and cross-references results with locally indexed NVD CVE data to identify vulnerabilities.
- Increased accuracy by flattening nested Nmap output, handling host level scripts (for example SMB and RDP checks) and adding a CPE mapping table for common services.
- Reduced noise for infrastructure scans by disabling unsuitable OSV results, limiting duplicate CVEs, and exporting findings to a JSON file with documented verification commands.

Migrate Zone, 2024 - 2025

Immigration Case Workflow Automation Toolkit

- Constructed a Python pipeline in a team to ingest staff uploaded case documents, batch merging using Adobe PDF Services, running OCR, and indexing pages for later checks.
- Implemented scan quality checks via OCR text coverage and confidence scores per page to flag low quality or unreadable scans before lodgement.
- Modelled visa subclass document requirements in JSON or Excel and applied rule-based checks on OCR output and file metadata to classify documents, detect missing items, and generate structured JSON or CSV summaries plus merged PDF packs for internal review.

TECHNICAL SKILLS

Technical: Python, Excel, JSON and CSV handling, HTML, CSS, Selenium, Git, GitHub, Jira, Postman, VMware, VirtualBox, Metasploit, Wireshark, Cisco Packet Tracer, Chrome DevTools.
