

# OM SHAH

Cybersecurity & Automation Engineer

Sydney, NSW · [contact@omshahinfo.com](mailto:contact@omshahinfo.com) · [linkedin.com/in/omshah](https://www.linkedin.com/in/omshah) · [github.com/0m-5hah](https://github.com/0m-5hah) · [omshahinfo.com](https://omshahinfo.com)

## PROFILE

Cybersecurity graduate with three years of experience building production automation and security-focused software. Cut average case-processing time by **35%** at Migrate Zone and independently built EightScope, a live external attack surface monitoring platform.

## CORE SKILLS

|             |                                                                                                                                  |
|-------------|----------------------------------------------------------------------------------------------------------------------------------|
| Security    | External attack surface monitoring, vulnerability assessment, Nmap/NSE, Wireshark, DNS and TLS assessment, HTTP security headers |
| Engineering | Python, REST APIs, PostgreSQL, JSON, OCR and PDF workflows, Excel automation, Git                                                |
| Platforms   | Linux, Windows, VMware, AWS IAM, Burp Suite, Postman, Jira                                                                       |

## PROFESSIONAL EXPERIENCE

**MIGRATE ZONE** July 2023 - Present

Automation Engineer, Part-time

Promoted from Junior Automation Engineer in December 2024

- Cut average case-processing time from approximately **8.0 hours to 5.3 hours** by co-building Python workflows for document validation, file naming, risk flagging and case routing.
- Combined financial audit checks and Excel prefill into one workflow, reducing duplicate reviews and repetitive data entry.
- Co-developed a PDF collation and OCR process that identified missing, expired and unreadable documents before lodgement.
- Created a government policy monitor and internal guides that allowed non-technical staff to use the automation tools independently.

**ITONKEY** August 2024 - October 2024

Python Backend Developer Intern, Part-time

- Developed a Python system that converted structured business data into branded, multi-page PDF invoices.
- Contributed stock-tracking and reporting features to an inventory-management platform for small businesses.

---

## SELECTED PRODUCT & PROJECTS

---

### EIGHTSCOPE

2026 - Present

#### Creator & Lead Developer

[eightscope.au](https://eightscope.au)

- Built and launched a live platform that maps a domain's public attack surface, identifies externally visible security risks and tracks changes between scans.
- Engineered domain ownership verification, subdomain discovery, hostname-level asset inventories and safeguards against private or reserved scan targets.
- Created repeatable scan workflows covering DNS, email authentication, TLS, HTTP security headers, exposed services, public files, technologies and possible CVE signals.
- Produced structured findings with severity, confidence, technical evidence, remediation guidance and PostgreSQL-backed scan history.

### SENTINEL

2025

Automated Network Vulnerability Scanner | UTS Capstone

- Created a Python vulnerability scanner using Nmap and NSE to discover hosts, identify services and surface possible CVE matches.
- Improved fingerprinting across SMB, RDP, nested Nmap output and host-level script results.
- Generated risk-prioritised JSON findings grouped by asset with commands for manual verification.

### DNS TUNNELLING DETECTION LAB

2025

Independent Security Lab

- Created an isolated VMware lab to study DNS tunnelling and capture network evidence using Wireshark.
- Produced defensive detection logic based on query entropy, subdomain length, burst timing and repeated-domain behaviour.
- Mapped the behaviour to MITRE ATT&CK T1048.003 and presented the captured PCAP through an interactive browser walkthrough.

## EDUCATION

---

### BACHELOR OF CYBERSECURITY

2023 - 2026

University of Technology Sydney

Relevant study: Network Security, System Security, Cloud Security, Digital Forensics, Incident Response and Cyber Threat Intelligence
